

## DEER RESISTANT PLANTS

The following list of plants all have certain properties (i.e. strong fragrance, hairy foliage, toxicity, etc) that tend to be offensive to deer. Remember that there are NO plants that are deer proof-- if deer are hungry and have no other options, they will eat just about anything. For extra protection, we recommend using a good professional strength repellent such as EPIC Deer Scram. See the tab on our web site for this and other EPIC animal repellent products.

<b>Annuals</b>	<b>Perennials</b>
